

SuperApp:

Page and device structure

Use two different presentation modes.

Research pages

The following must be responsive, full-browser pages and must not appear inside a mobile-phone frame:

- Consent page
- Study introduction
- Assigned scenario
- Task instructions
- Feedback questionnaire
- Attention-check messages
- Completion or termination page

These pages should use a centered content container, clear headings, comfortable reading width, sufficient spacing, and accessible buttons.

Super App task pages

Only the interactive Super App itself should appear inside the mobile-phone frame.

Keep the mobile layout realistic and touch-friendly.

2.Task guidance

Provide clear instructions before each task.

Each task instruction should include:

- Task number.

- The participant's goal.
- The service they need to use.
- The information they need to enter.
- A clear button such as "Start Task 1."

Do not give step-by-step instructions that reveal every required click before the participant begins.

After the participant enters the Super App, allow them to explore independently. If no relevant action occurs after approximately 10 seconds, display a non-blocking guidance banner.

Example:

"Task reminder: Use Courier to arrange the package pickup."

The reminder must:

- Appear in the same position across all conditions.
- Use neutral language.
- Not cover important controls.
- Be dismissible.
- Appear only once per task unless the participant requests help.
- Not automatically move the participant to the correct screen.

Add a small persistent task indicator, such as:

"Task 2 of 2: Arrange a courier pickup."

Add back button(all other screens) ,

Courier task interaction

Make the Courier journey fully interactive rather than visually simulated.

Include:

Sender details

- Editable sender-address field.
- Clear field label.
- Visible focus state.
- Functional keyboard behavior.
- Address validation.
- Address suggestions only when permitted by the study condition.

Recipient details

- Editable recipient-address field.
- Clear field label.
- Selectable saved or recent addresses when applicable.
- Clear selected state.
- Ability to change the selected recipient.
- Address validation.

Feedback questionnaire

Display the questionnaire as a full-browser page, not inside the mobile-phone frame.

Divide the questionnaire into two manageable pages.

Questionnaire structure

- Add a visible progress bar.
- Show progress text, such as "Page 1 of 2."

- Show the number of completed questions.
- Use simple visible numbering: 1, 2, 3, and so on.
- Do not display internal research codes such as CL1, AC1, PU1, or CI1 to participants.
- Keep scale direction consistent.
- Place endpoint labels clearly under the scale.
- Make the entire answer option clickable.
- Preserve answers when moving between questionnaire pages.
- Provide Back and Continue controls.

8:19 AM

Quick Feedback

Please answer each question based on your experience with the tasks you just completed. There are no right or wrong answers.

0 of 15 answered

CL1

How much mental activity was required to complete these tasks?

1 2 3 4 5 6 7

Very Low Very High

CL2

How hard did you have to work mentally to reach your performance?

1 2 3 4 5 6 7

Very Low Very High

CL3

How stressed or annoyed did you feel during the tasks?

Submit Feedback

Dive question into 2 page , Make attenuation check, should be the middle of the page. And if they did not pass AC, the test

**Add progress bar for the survey,
Submit behavior and missing answers**

Keep the final "Submit Feedback" button visually active.

When the participant selects it:

- Check all required questions.
- If all questions are answered, submit the questionnaire.
- If answers are missing, do not submit.
- Show a warning banner at the top.
- Highlight each unanswered question.
- Scroll to and focus on the first unanswered question.
- Preserve all completed answers.

Example warning:

"Please answer all required questions before submitting. Question 3 still needs an answer."

Use accessible error indicators. Do not communicate errors through colour alone.

Last, check all prototype, improve usability if needed,
